Description

SPARE OR REPLACEMENT BATTERY FOR: scooter models - 54i: nspire, 54i: conic, 54i: mpulse or 54i: gnite -

Our batteries (we call them "Kraftpakete" which means "power packs") are nothing less than the heart of our E-Shops! In all scooter models - 54i: nspire, 54i: conic, 54i: mpulse or 54i: gnite - there is room for up to 3 batteries at a time.

With just one battery, you can travel an average of 45 kilometers. When it's empty, you can simply remove it from the scooter and charge it at home (any household outlet will work). Our generators manage to go from 20 to 80% in less than three hours. It takes about four and a half hours to fully recharge an empty generator.

With our Kumpan Canada models of Emoblity 54i: conic, 54i: mpulse and 54i: gnite, you also have the option of simply leaving the power supplies in the scooter, recharging them via an external outlet or in your garage on the front flap . (Lithium-ion battery, 51 V, 28.5 Ah, 1.5 kWh / battery (no memory effect)) Compatible with Kumpan Canada Emoblity e-scooters of the "1954 Ri" and "54i" series.

If you have any further questions about the batteries, please feel free to contact us anytime - we're happy to help!
